

2004 PRIMARY SITE TABLE

St. Joseph Mercy Oakland and National Estimates

This table summarizes the cancer data from this hospital for the calendar year 2004. Malignancies are tabulated by site and total (number) of each malignancy, both analytical and non-analytical. Each malignancy is expressed as a percent of the total for this hospital and compared to the percent of total for the U.S. estimated cases. There has been a modest increase in total number of cases since last year (2003)—858 to 874. Malignancies of the lung, breast, brain and lymphocytes are slightly above national figures while melanoma is below.

SITE	ANALYTICAL	NON ANALYTICAL	TOTAL	% TOTAL	U.S. %*
Oral Cavity					
Lip	3	0	3	.3	.2
